

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

**Falco mexicanus.** Prairie Falcon. Saw one at Twenty-nine Palms and another on Providence Mountains.

**Falco sparverius deserticolus.** Desert Sparrow Hawk. Unexpectedly rare. Saw a few on the Mohave Desert and one on Providence Mountains. The only one noted in Arizona was in the Colorado River bottoms above Ehrenberg.

**Pandion haliaetus carolinensis.** American Osprey. Saw the remains of one near Ehrenberg.

**Bubo virginianus pacificus.** Pacific Horned Owl. Mr. Brandegee saw two in the Providence Mountains. I heard them in the Hualapai Mountains and near Ehrenberg.

*(To be concluded.)*

### A Strange Nesting Site of *Calypte anna*.

MR. W. Lee Chambers of Santa Monica has sent us photographs showing a very strange nesting site of the Anna hummingbird. Mr. Chambers writes:

"I am enclosing a couple of photographs of an Anna hummingbird's nest built on a telegraph pole in the busiest street of Santa Monica. It is built over a nest of last year, and the illustrations show its situation. The

construction is as usual: i. e., spider-web chiefly, covered on the outside with bits of moss, and lined with an unusual amount of white feathers. In fact the nest was so filled with feathers that I could hardly take the eggs out for fear of crushing them. The incubation was well advanced; date March 31, 1903."
